Ray Williamson is an optical engineering consultant with concentrations in optical fabrication, metrology, and quality. He has worked on a broad range of materials, sizes, and configurations, as a hands-on optician—in both prototype and production quantities—and has trained many opticians individually and through his own formal apprenticeship coursework. He has held positions as optician, process engineer, quality manager, and engineering manager at Optical Sciences Center, (University of Arizona College of Optical Sciences), Spectra-Physics, Coherent, Los Alamos National Labs, Laser Power Optics, and VLOC Subs. II-VI.

Most recently he has provided consulting services to users and manufacturers of precision optics. He offers process troubleshooting, training programs, documentation, measurement services, and waveplate consultation.

Williamson is a voting member of the Optical and Electro-Optics Standards Committee, board member of the Florida Photonics Cluster, Senior Member of OSA, and member of SPIE and APOMA. He has published over twenty papers on optical fabrication and testing, and is a Cochair of SPIE's Optical Manufacturing and Testing Conference.

He lives in Florida with his amazing wife, Lore Eargle.
