PROCEEDINGS OF SPIE

Quantum Computing, Communication, and Simulation IV

Philip R. Hemmer
Alan L. Migdall
Editors

27 January – 1 February 2024
San Francisco, California, United States

Sponsored and Published by
SPIE

Volume 12911

Proceedings of SPIE 0277-786X, V. 12911

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Quantum Computing, Communication, and Simulation IV, edited by Philip R. Hemmer, Alan L. Migdall, Proc. of SPIE Vol. 12911, 1291101 · © 2024 SPIE
0277-786X · doi: 10.1117/12.3030070

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Quantum Computing, Communication, and Simulation IV*, edited by Philip R. Hemmer, Alan L. Migdall, Proc. of SPIE 12911, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

DETECTORS AND SUPPORTING TECHNOLOGIES

12911 02 **Integrating superconducting single-photon detectors into active photonic circuits (Invited Paper)** [12911-1]

12911 03 **Integration of photonic integrated circuit functionalities with superconducting nanowire single photon detectors (Invited Paper)** [12911-7]

QUANTUM IN SPACE

12911 04 **Enhancing the optical communication telescope laboratory (OCTL) to support quantum communications between Earth and space (Invited Paper)** [12911-10]

12911 05 **Overview of NASA's quantum metrology laboratory and quantum communications analysis suite for degenerate source verification and validation within aerospace network applications (Invited Paper)** [12911-13]

12911 06 **Advancing quantum networking: some tools and protocols for ideal and noisy photonic systems (Invited Paper)** [12911-121]

12911 07 **Experimental effects of turbulence on coherent states in a free-space channel using adaptive optics for continuous variable quantum key distribution** [12911-14]

NONLINEAR QUANTUM PHOTONICS

12911 08 **Q-factor improvement of surface ion trap fabrication** [12911-21]

12911 09 **Stable optomechanical Fabry-Pérot architecture in a continuous microwave-to-optical transducer (Invited Paper)** [12911-23]

12911 0A **Thin-film lithium niobate waveguides for quantum photonics (Invited Paper)** [12911-24]

QKD

12911 0B **Towards a global continuous variable quantum key distribution network** [12911-26]

12911 0C **Fiber-based higher dimensional quantum key distribution implementation using time-bin qudits** [12911-28]

12911 0D **Decoy-state quantum key distribution over long-distance optical fiber** [12911-30]

QUANTUM COMPUTATION I

12911 0E **Quantum multi-programming for maximum likelihood amplitude estimation** [12911-33]

12911 0F **Quantum computing with oscillatory quanta** [12911-38]

12911 0G **Effect of noise and topologies on multi-photon quantum protocols** [12911-39]

12911 0H **Resolving wave-particle duality could accelerate the mass production of quantum computers** [12911-40]

12911 0I **Quantum machine learning approach for classification: case studies and implications** [12911-41]

QUANTUM INFORMATION MEETS QUANTUM BIOLOGY: JOINT SESSION WITH CONFERENCES 12863 AND 12911

12911 0J **A 4.5 ps TCSPC system for quantum sensing and imaging with superconducting nanowires** [12911-43]

12911 0K **Photon number resolving detection in commercially produced SNSPDs** [12911-44]

QUANTUM COMPUTATION II

12911 0L **Optical setup for a two-dimensional tweezer array with independently adjustable columns for neutral atom quantum computing** [12911-45]

12911 0M **Frequency-encoded synthetic dimensions for Hamiltonian simulation and topological photonics (Invited Paper)** [12911-48]

12911 0N **A hybrid quantum-classical approach to warm-starting optimization** [12911-49]

12911 0O **The Gell-Mann feature map of qutrits and its applications in classification tasks** [12911-51]

12911 0P **Nanostructured antireflective coatings for trapped ion quantum computing experiments** [12911-35]

QUANTUM SOURCES I

12911 0Q **Spin-orbit photonic circuits for quantum simulations** [12911-54]

12911 0R **Spin-photon entanglement from a solid-state system at telecom wavelengths** [12911-57]

12911 0S **Linearly polarized single photons in the telecom 'O' band from a quantum dot in an elliptical bullseye resonator** [12911-61]

12911 0T **Simulation and demonstration of non-degenerate high purity biphoton state generation by SPDC in PPKTP** [12911-62]

12911 0U **Ultra-bright polarization entangled photon sources, e.g. based on time-reversed Hong-Ou-Mandel interference** [12911-64]

INTEGRATION

12911 0V **Effect of spatial dimensionality on the spin-coherence decay in strongly-coupled spin baths** [12911-66]

12911 0W **Compact, high performant prepare-and-measure photon source based on indistinguishable VCSELs** [12911-67]

12911 0X **Photonic integration of ^{171}ytterbium single photon sources into an $LiNbO_3$-based photonic platform** [12911-68]

12911 0Y **Fiber-coupled quantum dot single-photon source via photonic wire bonding** [12911-69]

12911 0Z **Towards charge tunable quantum dot circular Bragg gratings** [12911-70]

12911 10 **Optimized entangled photon pair generation via intermodal four-wave mixing in a telecommunication-length few-mode fiber** [12911-72]

SUPPORTING TECHNOLOGY

12911 11 **Design and performance of 1762 nm Tm-doped fiber amplifiers for manipulation and control of optical qubits in ^{133}Ba+ ions** [12911-82]

12911 12 **Narrow linewidth 650 nm DBR laser diode for quantum applications** [12911-80]

12911 13 **Multiwavelength narrow linewidth laser system for Ba+ quantum computing applications** [12911-81]

12911 14 **Oqtant: democratizing quantum research and education** [12911-83]

12911 15 **Laser optics for the manipulation and readout of single atomic ions (Invited Paper)** [12911-84]

APPLICATIONS

12911 16 **Simulation and analysis of quantum phase estimation algorithm in the presence of incoherent quantum noise channels** [12911-88]

QUANTUM COMMUNICATIONS I

12911 17 **Generalized autonomous optimization for quantum transmitters with deep reinforcement learning** [12911-90]

12911 18 **Quantum networks with ytterbium atom processing nodes (Invited Paper)** [12911-95]

12911 19 **Experimental distribution of genuine time-bin entanglement at telecom wavelength** [12911-96]

QUANTUM COMMUNICATIONS II

12911 1A **Toward quantum networking with frequency-bin qudits (Invited Paper)** [12911-101]

12911 1B **Secure quantum random number generation with perovskite photonics** [12911-103]

12911 1C **All-optical quantum memory** [12911-105]

POSTER SESSION

12911 1D **Integrating the tin-vacancy defect into diamond nanostructures** [12911-108]

12911 1E **The role of state preparation in time-bin entangled photon pair generation for quantum communication** [12911-110]

12911 1F **Interferometer for phase-stabilization of quantum nodes using SIL-based color centers** [12911-120]

12911 1G **Practical quantum approximate optimization algorithms on IBM quantum processors** [12911-53]

Conference Committee

Conference Chairs

Philip R. Hemmer, Texas A&M University (United States)
Alan L. Migdall, National Institute of Standards and Technology (United States)

Conference Program Committee

Alexey Akimov, Russian Quantum Center (Russian Federation)
Michael Brodsky, CCDC Army Research Laboratory (United States)
Tina Brower-Thomas, Howard University (United States)
Ivan A. Burenkov, National Institute of Standards and Technology (United States)
Tatjana Curcic, Consultant for Quantum Information Science & Technology (United States)
Angela Hodge, NASA Space Communications and Navigation (United States)
Yuping Huang, Stevens Institute of Technology (United States)
Usman A. Javid, Joint Quantum Institute (United States)
Alicia Kollár, University of Maryland (United States)
Paulina S. Kuo, National Institute of Standards and Technology (United States)
Antia Lamas-Linares, AWS Center for Quantum Networking (United States)
Marko Loncar, Harvard John A. Paulson School of Engineering and Applied Sciences (United States)
Andrew Lord, BT Labs. (United Kingdom)
Joseph M. Lukens, Oak Ridge National Laboratory (United States)
William J. Munro, NTT Basic Research Labs. (Japan)
Prineha Narang, University of California, Los Angeles (United States)
Avi Pe'er, Bar-Ilan University (Israel)
Mirko Pittaluga, Toshiba Europe Ltd. (United Kingdom)
Matthew J. Sellars, The Australian National University (Australia)
Selim M. Shahriar, Northwestern University (United States)
Devin H. Smith, QuiX Quantum BV (Netherlands)
Robert E. Tench, Cybel, LLC (United States)
Jörg Wrachtrup, Universität Stuttgart (Germany)
Zheshen Zhang, University of Michigan (United States)
